

SNOW GUARD, S5 SYSTEM

The function of snow guard systems is to protect traffic and passers-by from snow and ice that slips off roofs. RHEINZINK's new S5 Snow Guard System is an alternative design that is guaranteed to impress. This is not just due to its high load-bearing capacity but also its attractive appearance: the stable guard rail is clad in the same RHEINZINK quality as the roof. This means that the roof and snow guard form a single entity, which caters for even the most stringent aesthetic demands.

Attractive appearance thanks to homogeneous look of material

Snow guard rail clad with RHEINZINK

High load-bearing capacity with filigree design

Quick and easy installation for double standing seam system

No roof penetrations necessary

Can also be fitted diagonally (e.g. at valleys)

Consisting of three perfectly coordinated system components:

- S5-Snow Guard Clamp
- S5-Snow Guard Rail
- S5-Ice Guard
